Monday 19 June 2023 | 3.15pm – 5.45pm

SEMINAR: THE TALENT CRISIS IN THE CCT INDUSTRY

This pre-event seminar will provide attendees with a focused platform for discussion and dialogue on the severe talent crisis the CCT industry is currently facing. Connectivity is at the heart of everything we do and virtualisation and the advent of cloud-based technologies have transformed the CCT industry.

This digital transformation will define generations to come and the current talent crisis in the industry is one of the most significant challenges the industry has faced. Building a future-ready workforce has to be one of the main priorities within organisations across the cloud content telecoms ecosystem if they are going to prepare for the new opportunities ahead.

The skills shortage in areas such as software engineering is happening at a time when much of the workforce engaged in traditional networking skills that are still required is at retirement age and there is a lack of diversity and inclusion in the sector. This combination has led to a severe shortage of the skills that will be needed to transform the networks, infrastructure and ensure connectivity to support customer demands for future decades.

Attendees will gain insight from a range of expert speakers from across the industry and outside the industry and have the opportunity to discuss and brainstorm over many of the challenges the industry faces whilst looking at viable solutions to solve the problems.
