# The Emerging New Ecosystem

Digitalisation and digital transformation has reshaped the telecom industry landscape, a new telecoms ecosystem has emerged where verticalisation is becoming evermore important. Virtualisation and the advent of cloud-based technologies led to a paradigm shift in the way telecom services and networks could be deployed. Covid-19 dramatically fast-forwarded the process of automation and had a significant impact on the acceleration of the sector as a whole. Increasing pressure is continually being placed on existing infrastructure as a result of the demand for cloud, the proliferation of new services, disruptive technologies and the ageing of existing infrastructure.

Competitive boundaries have shifted with increasing pressure from OTT, cloud and content providers. The continuing need to invest and innovate to upgrade existing networks for the future and build new networks in under-connected regions is essential if the ultimate goal of achieving global connectivity and enabling high quality internet access for all is to be realised.

## What is CCT 2023?

CCT 2023 – The Cloud, Content and Telecoms Summit has firmly established itself as the industry's leading event to focus on the changing cloud, content and telecoms ecosystem. It enables discussion, dialogue and communication at an executive level on many of the industry challenges relating to global connectivity and infrastructure and the new services that need to be delivered. Bringing together the leading executives from cloud providers and hyperscalers, fixed and mobile telecom carriers and service providers, interconnect, platform and data centre players, content and OTT providers, large enterprises and bandwidth intensive users from e.g. gaming, media, entertainment, financial services verticals, CCT 2023 provides a unique opportunity and platform to learn and discuss with peers, define priorities, advance agendas and shape the future industry.

## Participation

Participation is by invitation-only ensuring a targeted and focused audience. The format will be participative and interactive with expertly-facilitated boardroom-style discussions and brainstorming think tanks.

## High-quality Content

- content and OTT providers are looking for new partnership opportunities to deliver services.
- how the industry can leverage new technologies such as blockchain, automation and AI is critical
- reimagining network infrastructure and network services to support the platforms and customer demands of the future lies at the core of the challenge ahead
- understanding how different enterprise verticals are undergoing digital transformation and what that means from an infrastructure, connectivity and service point of view is ever more important.
- carriers and service providers need to redefine their market positions, evaluate their business processes and systems, transform and rebuild their business models and create new revenue streams if they are to play a significant role within this new ecosystem and increase shareholder .
- web-scale and cloud providers have specific requirements based on scale, service delivery, time to market.
- the subsea and backbone network market is changing and new financing and infrastructure models emerging with new forms of investment.
- data centre requirements continue to grow with an increased focus on edge computing to meet the anticipated proliferation of IoT devices; issues such as sustainability have come to the forefront.
- there is a shift towards on-demand, network-as-a-service and new platform-based models to respond to the needs of diverse industries.
- private equity has become integral to future investment in the industry but understanding who and what will be invested in is increasingly important.

## Why is CCT 2023 Different?

1. Participative and interactive – the format lends itself to interactive discussions through smaller, carefully chosen and expertly facilitated sessions with each attendee participating. No press are invited ensuring discussions are open. Attendance is at the same very high level as the speaker level enabling quality strategic discussion.
2. Executive-level attendees only: CEOs, CTOs, CCOs, COOs, Chief Infrastructure Officers and CMOs, Heads of Engineering, Network Acquisition, Infrastructure, Network Strategy are specifically invited - A targeted and focused audience.
3. Participation from across the wider ecosystem: Cloud Providers, Hyperscalers, Telecom Carriers, Service Providers, Content Providers and OTT/App players, CDN providers, Data Centre Players, Interconnect and Cross Connect Platform Providers, Enterprise and Digital First Businesses.
4. Breadth of content - enables dialogue and communication between various players.
5. Unique opportunity and platform - learn and discuss with peers, define priorities, shape agendas and the future of the industry.
6. Content-rich - no sales presentations or sales-driven exhibitions.

## Registration

Registration is by invitation-only and attendees must meet executive level criteria. ## SEMINAR: THE TALENT CRISIS IN THE CCT INDUSTRY

This pre-event seminar will provide attendees with a focused platform for discussion and dialogue on the severe talent crisis the CCT industry is currently facing. Connectivity is at the heart of everything we do and virtualisation and the advent of cloud-based technologies have transformed the CCT industry.

This digital transformation will define generations to come and the current talent crisis in the industry is one of the most significant challenges the industry has faced. Building a future-ready workforce has to be one of the main priorities within organisations across the cloud content telecoms ecosystem if they are going to prepare for the new opportunities ahead.

The skills shortage in areas such as software engineering is happening at a time when much of the workforce engaged in traditional networking skills that are still required is at retirement age and there is a lack of diversity and inclusion in the sector. This combination has led to a severe shortage of the skills that will be needed to transform the networks, infrastructure and ensure connectivity to support customer demands for future decades.

Attendees will gain insight from a range of expert speakers from across the industry and outside the industry and have the opportunity to discuss and brainstorm over many of the challenges the industry faces whilst looking at viable solutions to solve the problems.

### PRE-EVENT SEMINAR AGENDA:
